Overall Site Plan

Lot 2 DP869780 344 Castlereagh Highway Spring Flat NSW 2850

GENERAL NOTES:

- * All materials and work practices shall comply with, but not limited to the Building Regulations 2006, National Construction Code Series 2013, building Code of Australia Vol 2 and all relevant current Australian Standards (as amended) referred to therein.
- * Unless otherwise specified, the term BCA shall refer to National Construction Code Series 2013 Building Code of Australia Vol 2.
- * All materials and construction practice shall meet the Performance requirements of the BCA. Where an alternative solution is proposed then, prior to implementation or installation, it first must be assessed and approved by the Relevant Building Surveyor as meeting the Performance Requirements
- * Glazing, including safety glazing, shall be installed to a size, type and thickness so as to comply with:
- BCA Part 3.6 for Class 1 and 10 Buildings within a design wind speed of not more then N3: and
- NCC 2013 BCA Vol 1 Part B1.4 for Class 2 and 9 Buildings.
- * Waterproofing of wet areas, being bathrooms, showers, shower rooms, laundries, sanitary compartments and the like shall be provided in accordance with AS 3740-2010: Waterproofing of Domestic Wet Areas.
- * These drawings shall be read in conjunction with any House Energy Rating (HERS) report and shall be constructed in accordance with the stamped plans endorsed by the accredited Thermal Performance Assessor without alterations.
- * Step sizes (other than for spiral stairs) to be:
- Risers (R) 190mm maximum and 115mm minimum.
- Going (G) 355mm maximum and 240mm minimum.
- -2R+1G'0 700mm maximum and 550mm minimum.
- with less than 125mm gap between open treads.
- * All treads, landings and the like to have non-slip finish or suitable non-skid strip near edge of nosing.
- * Provide balustrade where changes in level exceeds 1000mm above the surface beneath landings, ramps and/or treads. Balustrade (other than tensioned wire balustrade) to be:
- -1000mm minimum above finished surface level of balconies, landings or the like, and
- 865mm minimum above finished surface level of stair nosing or ramp and,
- vertical with less than 125mm gap between, and
- any horizontal element within the balustrade between 150mm and 760mm above the floor must not facilitate climbing where changes in level exceeds 4000mm above the surface beneath landings, ramps and/or treads.
- * Wire balustrade construction to comply with BCA Part 3.9.2.3 for Class 1 and 10 Buildings and NCC 2013 BCA Vol 1 Part D2.16 for other classes of
- * Top of handrails to be minimum 865mm vertically above stair nosing and
- * Window sizes nominated are nominal only. Actual size may vary according to manufacturer. Windows to be flashed all around.

- * Where the building (excluding a detached Class 10) is located in a termite prone area, the area to underside of building and perimeter is to be treated against termite attack.
- * Concrete stumps:
- Up to 1400mm long to be 100mm x 100mm (1 no. H.D. Wire)
- 1401mm to 1800mm long to be 100mm x 100mm (2 no. H.D. Wires)
- 1801mm to 3000mm long to be 125mm x 125mm (2 no. H.D. Wires) - 100mm x 100mm stumps exceeding 1200mm above ground level to be braced where no perimeter base brickwork provided.
- * For buildings in marine or other exposure environments shall have masonry units, mortar and all built in components and the like complying with the durability requirements of Table 4.1 of AS 4773.1-2010 'Masonry in small buildings' Part 1: Design.
- * All stormwater to be taken to the legal point of discharge to the Relevant Authorities approval.
- * These drawings shall be read in conjunction with all relevant structural and all other consultants' drawings/details and with any other written instructions issued in the course of the contract.
- * Site plan measurements in metres, all other measurements in millimetres u.n.o.
- * Figured dimensions take precedence over scaled dimensions.
- * the Builder shall take all steps necessary to ensure the stability and general water tightness of all new and/or existing structures during all works.
- * The Builder and Subcontractors shall check and verify all dimensions, setbacks, levels and specifications and all other relevant documentation prior to the commencement of any works. Report all discrepancies to the office
- * Installation of all services shall comply with the respective supply authority
- * The Builder and Subcontractors shall ensure that all stormwater drains. sewer pipes and the like are located at a sufficient distance from any buildings footing and.or slab edge beams so as to prevent general moisture penetration, dampness, weakening and undermining of any building and its
- * These plans have been prepared for the exclusive use by the client of Avallon Building Design and Drafting ('The Designer') for the purpose expressly notified to the Designer. Any other person who uses or relies on these plans without the Designer's written consent does to at their own risk and no responsibility is accepted by the Design for such use and/or reliance.
- * The approval by this office of a substitute material, work practice, variation or the like is not an authorisation for its use or a contract variation. Any said variations must be accepted by all parties to the agreement and where applicable the Relevant Building Surveyor prior to implementing the said

STORMWATER

90mm DIA. Class 6 UPVC stormwater line laid to a minimum grade of 1:100 and connected to the legal point of stormwater discharge. Provide inspection openings at 9000mm C/C and at each change of direction.

The cover to underground stormwater drawings shall be not less than

- 100mm under soil
- 50mm under paved or concrete areas
- 100mm under unreinforced concrete or paved driveways
- 75mm under reinforced concrete driveways
