

C Oppegaard - PB Ag Soil Contamination Report

Section 1

Client	C Oppegaard
Date/Time	24/08/2023
Property Name	McIntosh Estate
Methodology	<p>Mid Regional Council have requested that a preliminary contamination investigation is conducted on the area around existing building of 521 Ulan Road Eurunderee, Lot 2 DP 618062</p> <p>2. Compliance with State Environmental Planning Policy (Resilience and Hazards) 2021</p> <p>The subject site has previously operated as a winery and contains a vineyard which may result in the site being contaminated as a result of the current and historic horticultural practices, as noted within Table 1 of the contaminated land planning guidelines.</p> <p>Pursuant to Clause 4.6(2) of State Environmental Planning Policy (Resilience and Hazards) 2021, Council must consider a report specifying the findings of a preliminary investigation of the land concerned carried out in accordance with the contaminated land planning guidelines where there is change of use on land (in this case for residential , commercial purposes) where development for horticulture is being, or is known to have been carried out on the land.</p> <p>The preliminary contamination investigation is to be prepared by a suitably qualified consultant and must include soil testing of the site. Where the report finds that contamination exists on the site, the report is to provided recommendations for remediation works required before the land may be suitable to be used for residential and commercial purposes.</p> <p>Methodology</p> <p>Systematic sampling is a probabilistic strategy that involves selecting points at regular intervals over an area, for example, grid intersections, or time.</p> <p>Systematic sampling does not generate clusters of sampling locations but ensures an even coverage of the site or decision area, which makes this approach ideal for characterising sites or decision areas. Systematic sampling is statistically unbiased as long as the coordinates of the first sampling location are determined randomly.</p> <p>Area was approximately .35 of a hectare.</p> <p>Number of sample site required 8 (EPA Sampling Design Contamination Guidelines)</p> <ul style="list-style-type: none"> - Samples were taken at set intervals across the pre determined test area. See attached sample grid(Appendix C) - Soil was collected using a soil sample probe which was washed with distilled water and dried prior to collecting soil from this site. Soil was collected at a depth of 20 cm. - Soil was immediately placed into labeled 250 ml glass jars, sealed with lid, 16 sample jars (2 jars per site tested) were supplied by ASL Laboratory Mudgee - Each sample jar was clearly labeled identifying sample site, sample number, date, time sampled by. - Once soil collected the jars were immediately placed in a chilled car fridge and delivered to ALS Mudgee NSW for required testing to be carried out. - All samples were collected by Paul Baguley of PB ag Consulting Pty Ltd - Preliminary investigation soil was tested to a depth of 20 cm <p>The area was tested on the 10th August 2023 and samples delivered to Lab 10th August 2023</p> <p>Soil was tested for 8 minerals, OC, OP. PCB</p>

C Oppegaard - PB Ag Soil Contamination Report

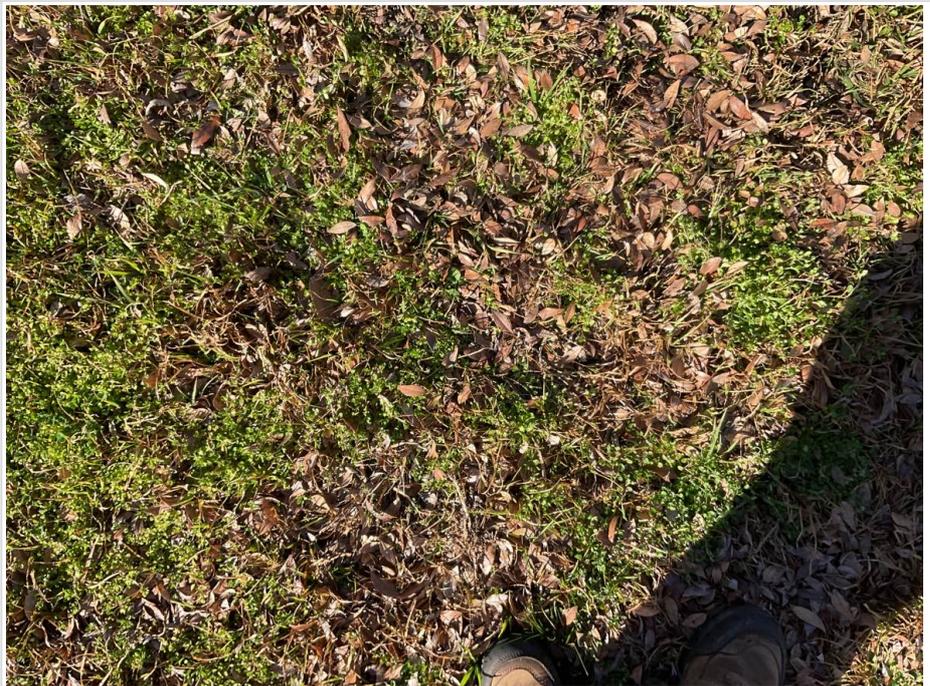

<p>Soil Results and Comments</p>	<p>(See appendix A for full soil Results)</p> <p>(See appendix Table 5-A - Soil Investigation Levels HILs)</p> <p>Summary of Results:</p> <p>Heavy Metals</p> <p>Arsenic falls in within safe guidelines for residential development Cadmium falls within safe guidelines for residential development Chromium falls within safe guidelines for residential development Copper falls within safe guidelines for residential development Lead falls within safe guidelines for residential development Nickel falls within safe guidelines for residential development Zinc falls within safe guidelines for residential development Mercury falls within safe guidelines for residential development</p> <p>OC, OP, PCB Organochlorine Pesticides (OC) falls within safe guidelines for residential development</p> <p>Organophosphorus Pesticides (OP) falls within safe guidelines for residential development</p> <p>Polychlorinated Biphenyls (PCB) falls within safe guidelines for residential development</p> <p>The preliminary contamination investigation has been conducted on the area around existing building of 521 Ulan Road Eurunderee, Lot 2 DP 618062. The results clearly demonstrate that soil contamination is not an issue and in the case of dwelling consent this should be approved inline with Development Application (DA)</p> <p>No Remedial soil works are required or recommended.</p>
<p>Additional Comments</p>	<p>Vineyards, orchards, and market garden soils have a typical background concentration of selected contaminants, and these would be expected to be found in any contaminant soil testing conducted on these sites.</p> <p>Contaminants typical background concentration (mg/kg)</p> <p>Arsenic 1 to 50 mg/kg Cadmium 1 mg/kg Copper 2 to 100 mg/kg Lead 2 to 200 mg/kg Zinc 10-300 mg/kg Nickle 5-200 mg/kg Mercury .03 mg/kg</p> <p>(Reference Table 5 -A Soil Investigation Levels mg/kg)</p> <p>Results from preliminary contamination testing fall within these ranges</p>

CERTIFICATE OF ANALYSIS

Work Order : ME2301445
Client : PB AG CONSULTING Pty Ltd
Contact : Paul Baguley
Address : PB AG CONSULTING P/L PO BOX 1197
MUDGEE NSW 2850
Telephone : 0428 404 109
Project : Soil
Order number : ----
C-O-C number : ----
Sampler : Paul Baguley (Client Sampler)
Site : PB Ag Consulting
Quote number : MU/42/18
No. of samples received : 8
No. of samples analysed : 8

Page : 1 of 9
Laboratory : Environmental Division Mudgee
Contact : Mary Monds (ALS Mudgee)
Address : 1/29 Sydney Road Mudgee NSW Australia 2850
Telephone : 02 6372 6735
Date Samples Received : 10-Aug-2023 10:30
Date Analysis Commenced : 15-Aug-2023
Issue Date : 18-Aug-2023 18:22

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
Alex Rossi	Organic Chemist	Sydney Inorganics, Smithfield, NSW
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Dian Dao	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- ALS is not NATA accredited for the analysis of Exchangeable Cations on Alkaline Soils when performed under ALS Method ED006.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H⁺ + Al³⁺).

Sulfur								600	
Sulfate ⁹								2000	

¹ Human exposure settings based on land use have been established for HILs (see Taylor and Langley 1998). These are:

- 'Standard' residential with garden/accessible soil (home-grown produce contributing less than 10% of vegetable and fruit intake; no poultry): this category includes children's day-care centres, kindergartens, preschools and primary schools.
- Residential with substantial vegetable garden (contributing 10% or more of vegetable and fruit intake) and/or poultry providing any egg or poultry meat dietary intake.
- Residential with substantial vegetable garden (contributing 10% or more of vegetable and fruit intake); poultry excluded.
- Residential with minimal opportunities for soil access: includes dwellings with fully and permanently paved yard space such as high-rise apartments and flats.
- Parks, recreational open space and playing fields: includes secondary schools.
- Commercial/Industrial: includes premises such as shops and offices as well as factories and industrial sites.

² Site and contaminant specific: on site sampling is the preferred approach for estimating poultry and plant uptake. Exposure estimates may then be compared to the relevant ADIs, PTWIs and GDs.

³ Site and contaminant specific: on site sampling is the preferred approach for estimating plant uptake. . Exposure estimates may then be compared to the relevant ADIs, PTWIs and GDs.

⁴ These will be developed for regional areas by jurisdictions as required.

⁵ Interim EILs for the urban setting are based on considerations of phytotoxicity, ANZECC B levels, and soil survey data from urban residential properties in four Australian capital cities.

⁶ Background ranges, where HILs or EILs are set, are taken from the Field Geologist's Manual, compiled by D A Berkman, Third Edition 1989. Publisher - The Australasian Institute of Mining & Metallurgy. This publication contains information on a more extensive list of soil elements than is included in this Table. Another source of information is Contaminated Sites Monograph No. 4: Trace Element Concentrations in Soils from Rural & Urban Areas of Australia, 1995. South Australian Health Commission.

⁷ Valence state not distinguished - expected as Cr (III).

⁸ The carbon number is an 'equivalent carbon number' based on a method that standardises according to boiling point. It is a method used by some analytical laboratories to report carbon numbers for chemicals evaluated on a boiling point GC column.

⁹ For protection of built structures.

Hexachlorobutadiene	0.3	0.1	0.0007		

¹⁰ Levels for recreational and industrial uses have not been set. For guidance on Recreational levels, see NHMRC/ARMCANZ, 1996. For recreational uses, toxic substances should, in general, not exceed the concentrations given for drinking water. For guidance on Industrial levels, see ANZECC, 1992. Industrial settings include: generic processes, hydro-electric power generation, textiles, chemical and allied industries, food and beverage, iron and steel, tanning and leather, pulp and paper, petroleum.
